Travelers

RE: Analytics Intern

To whom it may concern:

I am currently a third year PhD student in statistics with master and bachelor background in statistics. My research focus is on statistical data analysis of big data and specifically applying integrated data analysis on big data using heterogeneous network based and Bayesian based using data analytics methods. Throughout my education, I have contributed to various research data analysis using my broad knowledge of statistics. My strengths and qualifications are an ideal match to the data analytics intern requirements and will bring immediate value to Travelers.

In my 4+ years' industry experience as a data analyst in R&D departments of different companies, I cooperated with various departments and made positive statistical results through effective organization, prioritization, and follow through of the key organizational projects.

While I am independently motivated, I appreciate collective efforts and collaborate productively within group settings. Moreover, I am competent in statistical computing and data analytics as well as research and data management with proficiency in R.

This opportunity is especially exciting as my professional goals align with Travelers mission and values. Further, my communication, interpersonal, and leadership abilities will serve to support your continued organizational efforts.

Thanks for your time and consideration, and I am looking forward to hearing from you.

Sincerely,

Amin Shirazi
